

Dipankar Chakraborty

Quality Engineering Analyst

+91-8918943079 | dipankar.c8918@gmail.com | Bengaluru, INDIA | Experience: 5 Years | [Linkedin](#) | [GitHub](#)

Quality Engineer with 5 years of expertise in functional and automation testing, specializing in Java-based Selenium, BDD with Cucumber, and TestNG. Experienced in developing scalable automation frameworks and integrating them with CI/CD pipelines such as Jenkins and Azure DevOps to enable continuous testing and faster feedback cycles. Demonstrates strong skills in test design, root cause analysis, and Agile delivery. Proven track record of improving suite stability and pass rates, mentoring junior engineers, and collaborating with cross-functional teams. Seeking SDET / Automation Engineer roles in product-driven teams.

SKILLS

- Functional Testing
- TestNG
- POM
- CI/CD
- Git
- Selenium
- Cucumber
- TDD
- Jenkins
- SQL
- Java
- BDD
- Automation Testing
- Azure DevOps
- PostgreSQL

CERTIFICATION

- Infosys Global Agile Developer Certification
- Infosys Certified Selenium Automation Tester
- GitHub Copilot Fundamentals

WORK EXPERIENCE

Quality Engineering Analyst - Infosys

Sep 2021 - Present

- Developed and maintained robust Selenium-based automation frameworks using Java, TestNG, and Cucumber to ensure high-quality test coverage.
- Designed and executed Behavior Driven Development (BDD) test suites with Cucumber and Gherkin to improve collaboration with business stakeholders.
- Leveraged **GitHub Copilot** to optimize Java Selenium and BDD scripts, **reducing automation development time by 30%**.
- Optimized health-check and regression automation suites, improving pass percentage from **60% to 85%** and ensuring stable CI builds.
- Integrated automated test suites with CI/CD pipelines (Jenkins, Azure DevOps) to support continuous testing and faster feedback cycles.
- Analysed business and user requirements to create detailed test plans, scenarios, and cases, and produced high-quality defect reports that **reduced defect resolution time by 15%**.
- Led test execution cycles, coordinated with stakeholders for quality sign-off in Agile sprints, performed root cause analysis for production issues, and mentored junior QA engineers on test design and defect management.

PROJECTS

Verizon

306 Days

- Developed and maintained Java-based Selenium automation frameworks, focusing on BDD with Cucumber.
- Designed BDD test suites and improved collaboration using Cucumber and Gherkin.
- Utilized **GitHub Copilot** to significantly reduce script development times while optimizing test suite performance.

British Petroleum

731 Days

- Worked as a Lead Functional QA, managing functional, regression, integration, and UAT testing for enterprise-scale applications.
- Created detailed test documentation to ensure extensive coverage of critical business flows.
- Facilitated test execution cycles and coordinated with stakeholders for quality sign-off during Agile sprints.
- Produced detailed defect reports that enhanced communication with development teams and reduced resolution time.

Naukri Resume Automation

1691 Days

- Designed and implemented a custom automation framework to log in, delete, and re-upload resumes on Naukri using Java, Selenium, and TestNG.
- Integrated with Jenkins scheduler and GitHub Actions to execute daily automated tasks, eliminating manual intervention.
- Saved approximately **30 minutes** of manual effort per day and improved profile visibility.

EDUCATION

2021 B.Tech / B.E. | Electrical

College of Engineering & Management, Kolaghat
Grade - 8.37/10

EXTRA-CURRICULAR ACTIVITIES

Open Source Contribution

Contributed to and maintained automation framework code on GitHub focused on resume automation and CI/CD pipelines.

ACHIEVEMENTS

Automation Impact

Implemented automation improvements that increased regression suite pass rate from **60% to 85%**.
